

E. INFORME

Título del Proyecto: Primary School of Sihua.

Institución: Alma Foundation, I.E. 50743, Municipality of Coya, UGEL Calca.

Monto de apoyo:

Periodo del reporte: 08/15/13

1. Información del apoyo

I. Objetivos del proyecto.

The main objective of this project is to provide a one teacher for one grade scheme for the Primary School of Sihua, in order to attend to the total population of primary school students in the community avoiding migration of these students, long walks to other communities and more mal nutrition.

II. Resultados logrados a la fecha.

The school now counts with one teacher for each grade in the primary school, and is now running continuously. Thanks to the support of the Alma foundation there are two highly qualified teachers increasing the primary school range from 1st grade to 6th. These two teachers are bilingual (both teaching in Quechua and Spanish) to improve the grade of comprehension that the primary school students have.

The assistance of students is now higher, an average of 96 students in all the primary school.

III. Participación de los beneficiarios/as en el proyecto

The beneficiaries are in this case the children, and their participation has been constant, as their assistance to school is now better. In another manner, the parents of the children have been involved in activities such as typical dances at the school and other national festivity activities for the school organized by the teachers.

IV. Resultados no previstos

There has been some problems with parents not supporting their children in their assistance to school, as some of the teachers have reported that in some days children had poor conditions of hygiene and these children had also been noticed as the children that had high in assistance rates.

Also some teachers complained about the municipality not being punctual in the payments of the other teachers due to misunderstandings between the teacher's reports (that have to be sent in to the municipality in order to do the payment transaction) and the municipality. This however has been a long time problem with the municipality due to bureaucracy.

The primary school is now working in these newly built temporary modules, that have had some problems of humidity and structure in general. These modules have been built due to the new construction of the primary school being built in the community by the municipality of Coya. The construction has been already 4 months in delay and it is expected to be inaugurated in October.

2. Breve resumen de la ejecución del proyecto hasta la fecha.

The project overall is going very well, as students now have one teacher per class room and grade. This project is fairly simple a but it has helped the community largely. As said before, the moving of the class rooms to the temporary modules has affected in some ways the children's activity as these class rooms are extremely cold and humid, now however the humidity has reduced (as this was caused mainly due to the new cement construction) and the children have now gotten used to their class room modules. The expectation on the inauguration of the new school is big, and this will also give a new kick to the project , as I will not only be a primary school that the children can attend to with one teacher per class room, but also a primary school with the right infrastructure. It has been very important that the school has now the complete human resource for children to learn, and being a complete primary school, the parents of the community do not have to worry any more about their children having to walk long walks to other distant communities for their children to be able to study properly.

3. Beneficiarios hasta la fecha.

The beneficiaries are :

- 96 children of ages from 5 to 12 years old, we take this complete population of beneficiaries because practically all the students of the school have benefited from the project, this due to past years in the school where one teacher was teaching two or three grades at the same time.
- The Community of Sihua in General as now they can assure the studies of their children in primary school inside their own community.

4. Lecciones aprendidas

Describir las lecciones aprendidas por la organización ejecutora y las(os) beneficiarios/as (donde pueda aplicarse).

Some of the lessons learned in this stage have been that the municipality of Coya has a fairly bureaucratic and delaying side to it in the delivery and running of education projects. It is also important to mention that former Program Director of the Alma Foundation has had some problems and misunderstanding's with the mayor of Coya in the past due to the mayors intention in only hiring teachers from the community without paying attention to whether or not they are good teachers. So this has set us as a foundation a little bit apart from having to deal too much with this municipality.
